

## CLAIMS

Having thus described our invention, what we claim as new, and desire to secure by Letters Patent is:

1 1. A telephony apparatus, comprising:  
2 (a) a processor;  
3 (b) a storage attached to and controlled by the processor;  
4 (c) an object oriented operating system resident in the storage and controlling  
5 operations of the processor;  
6 (d) a display attached to the processor under the control of the object oriented  
7 operating system;  
8 (e) a telephony element attached to the processor;  
9 (f) a telephony object representative of the telephony element under the  
10 control of the object oriented operating system, stored in the storage and  
11 displayed on the display; and  
12 (g) means for controlling the telephony element by the object oriented  
13 operating system utilizing the telephony object.

1 2. The apparatus as recited in claim 1, including means for translating  
2 information received from the telephony element into information the  
3 object oriented operating system can utilize.

1 3. The apparatus as recited in claim 1, including means for translating  
2 information received from the telephony object into information the  
3 telephony element can utilize.

1 4. The apparatus as recited in claim 1, wherein the telephony object includes  
2 a method and data associated with the telephony object.

1 5. The apparatus as recited in claim 1, including means for attaching the  
2 telephony element to the processor.

1 6. The apparatus as recited in claim 5, including means for connecting a  
2 telephone line to the processor.

- 1 <sup>6</sup>/~~7~~. The apparatus as recited in claim <sup>4</sup>/~~5~~, including means for connecting a  
2 handset to the processor.
- 1 <sup>7</sup>/~~8~~. The apparatus as recited in claim <sup>4</sup>/~~5~~, including means for setting up a call to  
2 the processor.
- 1 <sup>10</sup>/~~9~~. The apparatus as recited in claim 1, including means for enabling features  
2 of the telephony element via the telephony object.
- 1 <sup>8</sup>/~~10~~. The apparatus as recited in claim <sup>4</sup>/~~5~~, including means for passing  
2 information between the telephony element and the processor.
- 1 <sup>9</sup>/~~11~~. The apparatus as recited in claim <sup>8</sup>/~~10~~, including means for exchanging  
2 DTMF tones between the telephony element and the processor.
- 1 <sup>11</sup>/~~12~~. The apparatus as recited in claim 1, including means for servicing queries  
2 between a telephony element and the object-oriented operating system.
- 1 <sup>12</sup>/~~13~~. The apparatus as recited in claim 1, including means for exchanging  
2 notification information between a telephony element and the object-  
3 oriented operating system.

1 <sup>13</sup> 14. A method for enabling telephony elements on a computer system,  
2 <sup>24</sup> including a processor with an attached storage, display and telephony  
3 <sup>02</sup> element, comprising:  
4 (a) controlling operations of the processor with an object oriented operating  
5 system resident in the storage;  
6 (b) creating a telephony object representative of the telephony element under  
7 the control of the object oriented operating system, stored in the storage  
8 and displayed on the display; and  
9 (c) controlling the telephony element by the object oriented operating system  
10 utilizing the telephony object.

1 <sup>14</sup> 15. The method as recited in claim <sup>13</sup> 14, including the step of translating  
2 information received from the telephony element into information the  
3 object oriented operating system can utilize.

1 <sup>15</sup> 16. The method as recited in claim <sup>13</sup> 14, including the step of translating  
2 information received from the telephony object into information the  
3 telephony element can utilize.

1 17. ~~The method as recited in claim 14, wherein the telephony object includes a~~  
2 ~~method and data associated with the telephony object.~~

1 <sup>16</sup> 18. The method as recited in claim <sup>13</sup> 14, including the step of attaching the  
2 telephony element to the processor.

1 <sup>17</sup> 19. The method as recited in claim <sup>16</sup> 18, including the step of connecting a  
2 telephone line to the processor.

1 <sup>18</sup> 20. The method as recited in claim <sup>16</sup> 18, including the step of connecting a  
2 handset to the processor.

1 <sup>19</sup> 21. The method as recited in claim <sup>16</sup> 18, including the step of setting up a call to  
2 the processor.

1 <sup>22</sup> 22. The method as recited in claim <sup>13</sup> 14, including the step of enabling features  
2 of the telephony element via the telephony object.

- 1 <sup>20</sup>  
~~23.~~ The method as recited in claim <sup>16</sup>~~18~~, including the step of passing  
2 information between the telephony element and the processor.
- 1 <sup>21</sup>  
~~24.~~ The method as recited in claim <sup>20</sup>~~23~~, including the step of exchanging DTMF  
2 tones between the telephony element and the processor.
- 1 <sup>23</sup>  
~~25.~~ The method as recited in claim <sup>13</sup>~~14~~, including the step of exchanging status  
2 information between a telephony element and the object-oriented  
3 operating system.
- 1 <sup>24</sup>  
~~26.~~ The method as recited in claim <sup>13</sup>~~14~~, including the step of exchanging  
2 notification information between a telephony element and the object-  
3 oriented operating system.
